Leica Viva TPS
Getting Started Guide
Introduction

For detailed descriptions of all functions and settings of the product and applications, please refer to the Leica Viva Series Technical Reference Manual.

Purpose of this manual

This Getting Started Guide is intended as a quick field reference manual for immediately getting started with your Leica Viva Series equipment. The manual explains what you can find in your container, how everything fits together and how to get started on the basic applications.

Quick references to specific topics

myWorld@Leica Geosystems ([https://myworld.leica-geosystems.com](https://myworld.leica-geosystems.com)) offers a wide range of services, information and training material. With direct access to myWorld, you are able to access all relevant services whenever it is convenient for you, 24 hours a day, 7 days per week. This increases your efficiency and keeps you and your equipment instantly updated with the latest information from Leica Geosystems.

Container Contents

Container for instrument and delivered accessories part 1 of 2

a) GHM007 Instrument height meter and GHT196 tribrach bracket for height meter
b) GEB221 battery
c) Data transfer cable
d) GFZ3 or GOK6 diagonal eyepiece
e) Counterweight for diagonal eyepiece
f) Instrument with tribrach and standard handle or RadioHandle
g) Protective cover for instrument, sunshade for objective lens and cleaning cloth
h) Allen key
i) GEB221 battery
j) GMP101 mini prism
Container for instrument and delivered accessories
part 2 of 2

a) Pocket knife
b) Spare stylus
c) Manuals
d) 2 x SD cards and covers
e) Tip for mini prism
f) GKL211 battery charger
g) Car adapter power plug for battery charger (stored under battery charger)
Container for GS15 SmartPole/SmartStation and delivered accessories part 1 of 2

a) GS15 instrument
b) GEB211 / GEB212 battery
c) GRZ4 / GRZ122 prism
d) Radio antennas
e) GRZ101 mini prism and GAD103 adapter
f) Spare stylus
g) Allen key
h) GAD31 adapter
i) CS10 field controller
j) GHT62 holder
k) GHT62 holder (extended)
l) CS15 field controller
m) SD card / CompactFlash card and covers
Container for GS15 SmartPole/SmartStation and delivered accessories

part 2 of 2

a) RH15 RadioHandle
b) Instrument carry handle
c) GHT63 clamp
d) Cables
e) GDC221 car adapter for CS field controller
f) GAD108 arm
g) GAD110 adapter for GS15 instrument
h) Manuals & DVD
i) GMP101 mini prism
j) Mini prism spike
Container for GS12 SmartPole/SmartStation and delivered accessories part 1 of 2

- a) GS12 instrument
- b) GEB211 / GEB212 battery
- c) GRZ4 / GRZ122 prism
- d) GRZ101 mini prism
- e) GAD103 adapter for GRZ101 mini prism
- f) GAD31 adapter
- g) Spare stylus
- h) Allen key
- i) GHT63 clamp
- j) CS10 field controller
- k) GHT62 holder
- l) SD card / CompactFlash card and covers
- m) GHT62 holder (extended)
- n) CS15 field controller
Container for GS12 SmartPole/SmartStation and delivered accessories part 2 of 2

a) RH15 RadioHandle
b) GMP101 mini prism
c) Field controller
d) GDC221 car adapter for CS field controller
e) Mini prism spike
f) GAD104 adapter for GS12 instrument
g) Manuals & DVD
h) Cables
### 1.2 Setting Up the TPS Instrument

#### TPS setup step-by-step

**Step** | **Description**
--- | ---
| ![Shade symbol] | Shield the instrument from direct sunlight and avoid uneven temperatures around the instrument. |
| 1. | Extend the tripod legs to allow for a comfortable working posture. Position the tripod over the marked ground point, centring it as well as possible. |
## Viva TPS, Equipment

<table>
<thead>
<tr>
<th>Step</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>2.</td>
<td>Fasten the tribrach and instrument onto the tripod.</td>
</tr>
<tr>
<td>3.</td>
<td>Turn on the instrument by pressing 📲. Select <strong>Main Menu/Instrument/TPS settings/Level bubble &amp; compensator</strong> to activate the laser plummet and electronic level.</td>
</tr>
<tr>
<td>4.</td>
<td>Move the tripod legs (1) and use the tribrach footscrews (6) to centre the plummet (4) over the ground point.</td>
</tr>
<tr>
<td>5.</td>
<td>Adjust the tripod legs to level the circular level (7).</td>
</tr>
<tr>
<td>6.</td>
<td>By using the electronic level, turn the tribrach footscrews (6) to level the instrument precisely.</td>
</tr>
<tr>
<td>7.</td>
<td>Centre the instrument precisely over the ground point (4) by shifting the tribrach on the tripod plate (2).</td>
</tr>
<tr>
<td>8.</td>
<td>Repeat steps 6. and 7. until the required accuracy is achieved.</td>
</tr>
</tbody>
</table>
1.3 Setting Up SmartStation

### Mount base radio to tripod step-by-step

<table>
<thead>
<tr>
<th>Step</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.</td>
<td>The GHT43 tripod adapter is used to mount the TCPS28 to all Leica standard tripods, and to optimise the radio transmission performance. Attach the TCPS28 to the adapter and then attach the adapter to the tripod leg.</td>
</tr>
<tr>
<td>2.</td>
<td>Adjust the angle of TCPS28 until it is vertical.</td>
</tr>
<tr>
<td>3.</td>
<td>Adjust the location of the adapter on the tripod leg so that there are no metallic objects in the horizontal plane around the antenna. Metallic objects near the antenna disturb radio transmissions.</td>
</tr>
<tr>
<td>4.</td>
<td>To achieve the best performance from the TCPS28, mount it in a vertical position on the tripod leg, approximately 30 cm from the top. If the adapter is no longer able to retain its angle position, the adjustment bolt at the hinge can be tightened slightly.</td>
</tr>
</tbody>
</table>
1.7 Fixing the CS to a Holder and Pole

Components of the GHT62 holder

The GHT62 holder consists of some components, as shown in the diagram.

- **GHT63 clamp**
  - a) Plastic sleeve
  - b) Pole clamp
  - c) Clamp bolt

- **GHT62 holder**
  - d) Locking pin
  - e) Top clip
  - f) Mounting plate (extendable)
  - g) Bottom clip
  - h) Tightening screw
  - i) Mounting arm
# Fixing the CS field controller and GHT62 to a pole step-by-step

<table>
<thead>
<tr>
<th>Step</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.</td>
<td>Insert the pole into the clamp hole.</td>
</tr>
<tr>
<td>2.</td>
<td>Attach the holder to the clamp using the clamp bolt.</td>
</tr>
<tr>
<td>3.</td>
<td>Adjust the angle and the height of the holder on the pole to a comfortable position.</td>
</tr>
<tr>
<td>4.</td>
<td>Tighten the clamp with the clamp bolt.</td>
</tr>
<tr>
<td>5.</td>
<td>Before the CS field controller is placed onto the mounting plate, ensure that the locking pin is put into the unlocked position. To unlock the locking pin, push the locking pin to the left.</td>
</tr>
<tr>
<td>6.</td>
<td>Hold the CS field controller above the holder and lower the end of the CS field controller into the mounting plate.</td>
</tr>
</tbody>
</table>

- If you use the CS15 field controller, extend the mounting plate of the holder first.
- For an aluminium pole, fit the plastic sleeve to the pole clamp.
<table>
<thead>
<tr>
<th>Step</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>7.</td>
<td>Apply slight pressure in a downward direction and then lower the top part of the CS field controller until the unit is clicked into the holder. The guides of the mounting plate aid in this action.</td>
</tr>
<tr>
<td>8.</td>
<td>After the CS field controller is placed onto the mounting plate, ensure that the locking pin is put into the locked position. To lock the locking pin, push the locking pin to the right.</td>
</tr>
</tbody>
</table>
### Detaching the CS from a pole step-by-step

<table>
<thead>
<tr>
<th>Step</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.</td>
<td>Unlock the locking pin by pushing the locking pin to the left of the mounting plate.</td>
</tr>
<tr>
<td>2.</td>
<td>Place palm over the top of the CS until fingers grip the bar of the holder underneath.</td>
</tr>
<tr>
<td>3.</td>
<td>Push from the top of the CS toward the bar of the holder.</td>
</tr>
<tr>
<td>4.</td>
<td>While in this position, lift the top of the CS from the holder.</td>
</tr>
</tbody>
</table>

<th>Description</th>
</tr>
</thead>
</table>
| **User**           | - To format the memory device.  
                    - To upload files relevant for the instrument functionality, for example, firmware files, language files and licence keys.  
                    - To transfer data between the memory device and a standard and simple FTP server.  
                    - To view files on the memory device or the internal memory.  
                    - To access all configuration parameters individualising the system and the working style.  
                    - For TS11/TS15: To check and adjust the compensator, index error and line of sight error.  |
2.1.4 Leica Favourites

Description
Frequently used settings can be accessed and changed quickly through the Leica TPS Favourites and Leica GPS Favourites screens. The change is applied immediately and the workflow is not interrupted. The screens display selectable icons for quick check functions or for available settings to change to.

Access
For TPS:
- Tap the target aiming icon or select 🌟.
For GPS:
- Tap the position status icon or select 🌟.
To change to one of the displayed settings, or access a quick check function, do one of the following:

- Tap on the icon on the touch screen.
- Highlight a field and press OK.
- Highlight a field and press OK.
- Highlight a field and press OK.
- Press the number next to the setting or function.

**OK**

To apply the selected setting or to access the selected function.

**Fn Quit**

To exit the screen.
To change to one of the displayed settings, or access a quick check function, do one of the following:

- Tap on the icon on the touch screen.
- Highlight a field and press OK.
- Highlight a field and press OK.
- Highlight a field and press OK.
- Press the number next to the setting or function.

**OK**
To apply the selected setting or to access the selected function.

**Fn Quit**
To exit the screen.
## 2.2 Operating Principles

### Accessing a menu option

<table>
<thead>
<tr>
<th>Description</th>
<th>Illustration</th>
</tr>
</thead>
<tbody>
<tr>
<td>There are three ways to access a menu option.</td>
<td><img src="image" alt="Illustration" /></td>
</tr>
<tr>
<td>1. Using the touchscreen functionality. Tap on the menu item using the stylus provided</td>
<td><img src="image" alt="Illustration" /></td>
</tr>
<tr>
<td>2. Using the up and down navigation arrows. Move the focus to the menu item. Select OK, or press the OK button, or the ENTER button.</td>
<td><img src="image" alt="Illustration" /></td>
</tr>
<tr>
<td>3. Using the numbered keypad. Select the number that corresponds to the menu item. For example, press 1 from the Jobs &amp; Data menu to access the New job screen.</td>
<td><img src="image" alt="Illustration" /></td>
</tr>
</tbody>
</table>
## Accessing a selectable list

<table>
<thead>
<tr>
<th>Description</th>
<th>Illustration</th>
</tr>
</thead>
<tbody>
<tr>
<td>A downward arrow beside a field, indicates there are more choices available in a selectable list. A box and a downward arrow beside a field, indicates that there are more choices and functionality available in a separate screen. To access the list or screen use the touchscreen functionality to tap on the icon, or move the focus to the field and press the <strong>ENTER</strong> button.</td>
<td><img src="Device.png" alt="Illustration" /> <img src="Codelist.png" alt="Illustration" /></td>
</tr>
</tbody>
</table>

## Accessing a page within a screen

<table>
<thead>
<tr>
<th>Description</th>
<th>Illustration</th>

</table>
Exiting a screen without making a change

To exit a screen without making a change, either:

- Tap on the return icon, or
- Press the **ESC** button

Wizards

The wizards following are available to make your daily work easier. Each of them lead you through a series of steps, performing tasks in a specific sequence. For detailed descriptions of the wizards, please refer to the Leica Viva Series Technical Reference Manual.

<table>
<thead>
<tr>
<th>Wizard</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>SmartWorx StartUp Wizard</strong></td>
<td>Define the behaviour of your instrument for a general start-up.</td>
</tr>
<tr>
<td>RTK rover wizard</td>
<td>Set up your real-time rover.</td>
</tr>
<tr>
<td>TPS connection wizard</td>
<td>Connect your CS field controller with your TPS instrument.</td>
</tr>
<tr>
<td>Internet wizard</td>
<td>Connect your CS field controller with the Internet.</td>
</tr>
</tbody>
</table>
CS connection wizard | Connect your CS field controller with your TS11/TS15 instrument.
---|---
Working style wizard | Configure the parameters and functions of SmartWorx Viva so that it suits to your preferred method of working and save the settings in a working style.
Check & Adjust Wizard | For TS11/TS15. Check and adjust the instrument in the field by running through specific measurement procedures.

<table>
<thead>
<tr>
<th>Step</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.</td>
<td>Tap the camera icon (\text{Capture Image with Camera}) in the icon bar to access the \text{Capture Image with Camera} screen. For a CS field controller, which is configured to use a TS11/TS15 instrument with a wide-angle camera, the \text{Capture Image with Camera} screen has two pages (\text{TS wide-angle} and \text{CS camera}). Select which camera to use by clicking the corresponding page or using Page to toggle between both pages.</td>
</tr>
<tr>
<td>2.</td>
<td>Aim the camera to the desired target.</td>
</tr>
<tr>
<td>Step</td>
<td>Description</td>
</tr>
<tr>
<td>------</td>
<td>-------------</td>
</tr>
<tr>
<td>3.</td>
<td>Check the view at the display.</td>
</tr>
</tbody>
</table>
| 4.   | Press **OK** or click **Cpture** to take the picture.  
* **Cpture** changes to **Store**. |
| 5.   | The image can be overlaid with a sketch. Click the 🖋 icon in the toolbar to activate sketching. The 🖋 icon is displayed. Additional icons are displayed to control the line weight, style and colour of any lines you "sketch" on top of your image. The image cannot be moved. |
| 6.   | Press **Store** to save the image. A confirmation window opens. The image can be linked to a point, line or area. |
| 7.   | • Press **Prev** to link the image with the last stored point and save it.  
• Press **Any** to link the image with any point, line or area of the current working job and save it.  
• Press **No** to save the image in the current working job without linking it to a point, line or area.  
* After the image has been stored you automatically return to the **Capture Image with Camera** screen. |
## Taking a screenshot

<table>
<thead>
<tr>
<th>Step</th>
<th>Description</th>
</tr>
</thead>
</table>
| 1.   | Press the hotkey configured to **User - Screenshot capture** or hold **Fn** while pressing '.'. A screenshot of the current SmartWorx Viva screen is created and displayed in the **Image Notes** screen.  

☞ The hotkey functionality is not available on the CS10 field controller. |
| 2.   | The screenshot can be overlaid with a sketch. Click the icon in the toolbar to activate sketching. The icon is displayed. Additional icons are displayed to control the line weight, style and colour of any lines you "sketch" on top of your image. The image cannot be moved. |
| 3.   | Press **Store** to save the screenshot. A confirmation window opens. The screenshot can be linked to a point, line or area. |
| 4.   | • Press **Prev** to link the screenshot with the last stored point and save it.  

• Press **Any** to link the screenshot with any point, line or area of the current working job and save it.  

• Press **No** to save the screenshot in the current working job without linking it to a point, line or area.  

☞ After the screenshot has been stored you automatically return to the screen where the screenshot has been taken from. |
## 2.3 Connecting TPS instrument and CS field controller

### Connecting TPS instrument and CS field controller setup step-by-step

<table>
<thead>
<tr>
<th>Step</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.</td>
<td>Set up your TPS instrument. Refer to &quot;1.2 Setting Up the TPS Instrument&quot;.</td>
</tr>
<tr>
<td>2.</td>
<td>Fix either a hand strap to your CS field controller or fix your CS field controller to a holder and pole.</td>
</tr>
<tr>
<td>3.</td>
<td>Turn on your TPS instrument and your CS field controller. Ensure that your TPS instrument is ready for remote control. The RCS mode is only available for the CS15 field controller while the datalogger mode is available for all CS field controllers.</td>
</tr>
<tr>
<td>4.</td>
<td>Start the SmartWorx Viva software. Refer to &quot;2.1 SmartWorx Viva&quot;.</td>
</tr>
<tr>
<td>5.</td>
<td>Select <strong>Main Menu: Instrument\Instrument connections\TPS connection wizard</strong> to start the <strong>TPS connection wizard</strong>. For detailed descriptions, please refer to the Viva Series Technical Reference Manual.</td>
</tr>
<tr>
<td>6.</td>
<td>Follow the <strong>TPS connection wizard</strong> and connect your TPS instrument to your CS field controller.</td>
</tr>
</tbody>
</table>
Jobs & Data

3.1 Creating a New Job

Creating a job step-by-step

General steps to create your first job in SmartWorx Viva.

Creating your first job
• From the Main Menu, select Jobs & Data and press OK.

• Select New job from the Jobs & Data menu and press OK.
• Enter a name for the job.
• Use Page to toggle between the pages to set the proper Codelist, CAD files, Coord system, TPS scale and Averaging.
• Press Store to save the job.

You have finished creating your first job, which is selected as current working job. You will automatically return to the Main Menu and are ready to start the next activity.
3.2 Creating a Codelist

Creating a codelist step-by-step

Generals steps to create your first codelist in SmartWorx Viva.

Creating your first codelist

- From the **Main Menu**, select **Jobs & Data** and press **OK**.

- Select **Job properties** from the **Jobs & Data** menu and press **OK**.
• Press Page to change to the Codelist page.
• Tap on the selectable list to open the Codelists screen.

• Press New.. to create a codelist.

• Type in a Name (Description and Creator are optional).
• Press Codes.. to open the Codes screen.
Creating a code

- Press New.. to create a code.

- Type in a Code (EL) and a Description (Light Pole), select the Code group* (Electric), the Code type (Point) and the Linework (None) and create an attribute (Diameter).

- Press Store to save the new code.

* The Code group has to be created first before it can be selected.

- Press OK to return to the New Codelist screen.
Storing the codelist

- Press Store to save your codelist. You will automatically return to the Codelists screen.

- Press OK to return to Job Properties:, Codelist page.
- Press Store to save your job and to return to the Main Menu.
You have created your first codelist, with a code and a code group and attached it to your current working job.
3.3 Importing ASCII Data into a Job

Objective

Importing point objects into the working job by using the Import ASCII data functionality.

At least one ASCII file with any file extension must be stored in the \DATA directory of the internal memory or data storage device.

Import ASCII data step-by-step

Starting the ASCII Importer

- From the Main Menu, select Jobs & Data.

- In the Jobs & Data menu, select Import data, then Import ASCII data and access the Import ASCII Data screen.
• Select the data storage device, the data type (ASCII data), the file to be imported, the working job into which the data has to be imported and define whether header lines have to be considered.

• Enter the Configuration screen (Config..).

Configuring the ASCII Importer
• Select the Delimiter.
• Define the position for Point ID, Easting, Northing, Height and Code (if applicable).
• Confirm the configuration settings and return to the Import ASCII Data screen (OK).

• Enter the Define Ht Type & Easting Import screen (Fn Hts..).
Define height type and Easting import
  • Define how heights (Orthometric or Ellipsoidal) and how the Easting is imported.
  • Confirm the configuration settings and return to the Import ASCII Data screen (OK).

Importing the ASCII data
  • Import the ASCII data to the working job (OK).

  • After importing the ASCII data to the working job, complete the import (No) and return to the Main Menu or import another ASCII data (Yes).
You have completed importing ASCII data into your current working job.
Getting started

• Check that the correct working style (see User, Working style wizard) is being used.

• Check that the correct working job (see Jobs & Data, Choose working job) is being used.
4.1 Setup

Objective

Determine the station coordinates and the orientation of your TPS instrument using TPS measurements and/or GNSS measurements.

Setting up with SmartStation step-by-step

Starting Setup

• In the Go to Work! menu, select Setup.

• Choose one of the following setup methods and select OK:
  - Set orientation
  - Known backsight
  - Multiple backsights
  - Transfer height

These are the only methods applicable for a setup with SmartStation.
Setting the station point
- **Station point from**: Select **GPS - SmartStation**.
- **Instrument height**: Enter the height of the instrument station.

Ensure that the correct antenna type is set. This will ensure the vertical offset between the TPS and GS12/GS15 instrument is accounted for.
- **OK** to access the GPS Survey screen.

Measuring the station point
- **Meas** to start the point measurement.
- **Stop** to end the point measurement.
- **Store** to store the point information.

Selecting a coordinate system
If a coordinate system has not been selected:
- **Local** to access **One Pt OneStep**
  OR
- **CrdSys.** to access **Coordinate Systems** to select an existing coordinate system. On this screen, the creating and editing of coordinate systems is also available.
- **CoordSys Name** Enter a name for the local coordinate system.
- Enter local coordinates for the setup point.
- **OK** to set the coordinate system.

### Setting the station orientation
- **Backsight ID**. Select the relevant point id for the backsight point.
- **Dist** to measure the point.
- **Set** to set the station orientation and return to the **Main Menu**.

.Footer message: Now you have completed your setup with SmartStation.
Starting Setup

• In the Go to Work! menu, select Setup.

• Choose one of the following setup methods and select OK:
  – Multiple backsights
  – Resection
  – Known backsight

These methods are the only methods applicable for a setup with SmartPole.

• The process for Setup method: Resection is shown here.
Enter station information

- **Station ID** Enter a name for the station.
- **Instrument height**: Enter the height of the instrument station.
- If all your control points will come from GPS, leave **Use control job for the target points** unselected.
- **OK** to access the measure target points screens.

**Measuring the target points**

- **Target height**: Enter your prism height. When moving to GPS Survey, the correct vertical offset will be applied, so you automatically have the correct antenna height.
- **GPS** to first enter GPS Survey before returning to this screen.
• **Meas** to start the point measurement.
• **Stop** to end the point measurement.
• **Store** to store the point information and automatically return to **Measure Target 1** in TPS mode.

• **Meas** to measure to target point 1 with TPS. Screen automatically updates to **Measure Target 2**.

• Repeat the previous steps to measure the other target points.

**GPS** to first enter GPS Survey before returning to the **Measure Target** screen, then

**Meas** to measure to each target point with TPS.

👉 When enough target points have been measured to calculate the station location, the softkey **Calc** will appear.
• **Calc** to calculate the position of the station.

Setting the station
• Review the results of the station setup.
• **Set** to set the station position and return to the **Main Menu**.

👉 You have completed your setup with SmartPole.
4.2 Survey

Objective

Surveying point objects (fire hydrants, light poles etc.) by choosing codes manually.

Starting Survey

- In the Go to Work! menu, select Survey and access Survey.

- Switch to the Code page.
Selecting the code

- Highlight **Code** and select the code EL (for Electric Light pole). To select the code EL, toggle to the code or type in the letters to open the drop-down list and search for the code.

  ➡️ Enter the search text in the same case as the code (for example capitals).

Measuring the point object

- When the code is selected, press **Meas** to measure the point object.

  ➡️ After the measurement has been stopped the **Enter Mandatory Attribute** screen will appear since the attribute **Diameter** is mandatory and is currently blank.

- Enter a diameter of **300 (mm)** and press **OK** to store the point.
You have finished measuring your first point object.
Once the point is stored then the code and attribute value that was stored are displayed.
4.3 Stakeout

Objective

Staking out point objects. To make your life easier you will define a filter before staking out the point object. The filter will be defined the way that only points with a certain code and those points which have not yet been staked will be available to be staked out.

To accelerate the working example, skip the steps regarding the filters and proceed directly with staking out the point object.

Starting Stakeout

- In the Go to Work! menu, select Stakeout and access Stakeout.
Choose Control Job
- Select the job which contains your point objects to be staked out.
- Press OK to enter the Stakeout screen.

Configuring Stakeout
- Press Fn Config.. to access the Configuration screen.

- Configure the following settings:
  - General page, Quality control page and Report sheet page: Leave all settings unchanged.
  - Heights page: Check Offset height of all points being staked and set Height offset to 0.000 m.
• **Graphics** page: Set **Navigate direction:** Following arrow and **Navigate using:** In/out, left/right.

• Press **OK** to return to the **Stakeout** screen.

**Setting up filters**

• Tap on the box with the downward arrow right of the Point ID to open the Data screen. All points stored in the control job are shown.

• Press **Fn Filter..** to access **Sorts & Filters** screen.
• Set **Filter by: Point code**.
• Press **Codes..** to access **Point Code Filter** screen.

• Press **None** to set all codes to No.
• Highlight code **EL** and press **Use** to activate it.
• Press **OK** to return to the **Sorts & Filters** screen.

• Press **Stake** to access **Stakeout Filter** screen.
• Set **View: Points to stake.**
• Press **OK** three times to return to the **Stakeout** screen.

**Staking out your first point object**
• Navigate to the point and press **Dist.**
• While measuring the point you still can see the differences between the coordinates of the design point and the coordinates of the point you measured.

惬意 The continuous measurement mode can be used for staking out.
• The next point in the list to be staked out is displayed after the point was measured and stored by pressing **Meas.**

惬意 You finished staking out your first point.
4.4 Reference Line

Objective

Measuring or staking point objects (fire hydrants, light poles etc.) relative to a reference line.

Starting Measure to ref line

- In the Go to Work! menu, select Survey+ and access Survey+ menu.
  - Staking a reference line can also be accessed under Go to Work! / Stakeout+ / Stake to ref line.

- Select Measure to ref line and continue (OK).
Define the Reference line task
- Set **Reference line task: Measure to line** and continue (OK).

Choose Control Job
- Select the job which contains the points used to define the reference line.
- Press **OK** to access **Reference Line To Use** screen.

Define the reference line to be used
- Set **Create line using: 2 points**
- Select a **Start point**
- Select an **End point**
- Press **OK** to access **Measure Points** screen.
Measure the point object relative to the reference line

- In the **Measure Points** screen, press **Meas** to measure the point.

👉 You have finished measuring your first point object relative to a reference line.
Appendix A Working with Memory Devices

A.1 Formatting a Memory Device

General

Formatting a memory device before storing data on it, is required if the device is new, or if all data on the device must be deleted.

By activating the format command all data will be lost. Make sure that all important data on the device has been backed up before formatting. If formatting the internal memory, make sure that all important data is first transferred to the computer.

Formatting the memory device will make it incompatible with System 1200 instruments with firmware version 7.60 or earlier. To become usable with System 1200 again, the device would need to be reformatted on a System 1200 instrument.

To exit the screen without formatting the memory device, press the ESC key. This returns to the previous screen without running the format command.
Formatting a memory device step-by-step

- From the **Main Menu**, select **User\Tools & other utilities\Format memory devices**

- **Memory device**: Select the device to format
- Select **OK** to continue with the formatting.
Select **Yes** to complete the formatting of the memory device, OR
Select **No** to cancel formatting of the memory device and return to **Format Memory Device**.
Once the formatting of the memory device is completed the system returns to the **Main Menu**.
A.2 Directory Structure of the Memory Device

Directory structure

Appendix B Uploading System Files

Tips and Tricks

- Uploading objects can take some time. Ensure that the battery is at least 75% full before beginning the upload, and do not remove the battery during the upload process.

- Applications will be installed in English and in any other language that is already loaded onto the instrument. If a new language is loaded after an application has been installed, the application will need to be reinstalled to become available in the new language.

- It is not possible to have more than three language files stored on the instrument. English is always available as the default language and cannot be deleted.

Copy the object to upload into the /SYSTEM directory of the data storage device and insert the device into the instrument.

Firmware files use the extension *.fw, application files use the extension *.axx, and language files use an extension that is individual to each language.
Uploading firmware, applications or languages step-by-step

- From the **Main Menu**, select **User\Tools & other utilities\Load firmware & Apps**

- **Object to transfer**: Select the type of object to upload
- **From**: Select the data storage device where the object is located
- **App / Firmware / Language**: Select the file name of the object
- Select **OK** to upload the object onto the instrument.
• The upload process can take some time. A message will appear when the upload is complete.
Appendix C  Leica Geo Office

Description

Leica Geo Office (LGO) is an office software consisting of a suite of standard and extended programs for the viewing, exchange and management of data.

Jobs, codelists and other related files can be transferred from the instrument or data storage device to LGO for post-processing.

In LGO, the Data Exchange Manager enables data to be transferred between an instrument and a computer. The Import Raw Data function in LGO, imports the data from the computer or data storage device into an LGO project.
<table>
<thead>
<tr>
<th>Step</th>
<th>Description</th>
</tr>
</thead>
</table>
| 1.   | • If data is located on a data storage device, insert the device into the appropriate slot or port of the computer. Go to step 7.  
• If data is stored on the CS10/CS15 instrument, connect the instrument to the computer using the docking station or a USB cable. Copy the data to the computer using Microsoft ActiveSync or Windows Mobile Device Centre. Go to step 7.  
• If data is located on the TPS instrument, connect the instrument to the computer using a USB cable, Bluetooth connection, or an RS232 serial cable. Go to step 2. |
| 2.   | Select **Tools/Data Exchange Manager** to open the **Data Exchange Manager** window. |
| 3.   | Right click in the **Data Exchange Manager** window and select **Settings**....  
• For a USB connection, ensure that the USB port settings are configured for the instrument type being connected.  
• For a Bluetooth or RS232 serial cable connection, ensure the instrument interface settings and the computer COM settings are configured correctly.  
Select **OK** to close the **Setting** window. |
<table>
<thead>
<tr>
<th>Step</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>4.</td>
<td>In the folder directory on the left of the <strong>Data Exchange Manager</strong> window, open the <strong>Serial Ports</strong> or <strong>USB</strong> COM node to which the instrument is connected. Highlight the object to transfer.</td>
</tr>
<tr>
<td>5.</td>
<td>In the folder directory on the right, open the <strong>My Computer/Files</strong> folder location. Select a folder on the computer hard drive where the object can be transferred to and saved.</td>
</tr>
<tr>
<td>6.</td>
<td>Drag and drop, or copy and paste, the object from the directory on the left side to the selected folder on the right side. All object-specific files will be copied to the selected folder on the computer hard drive.</td>
</tr>
<tr>
<td>7.</td>
<td>To import the files into LGO select <strong>Import/Raw Data...</strong> or select the icon from the toolbar.</td>
</tr>
</tbody>
</table>
8. In the **Import Raw Data** window, select the type of data to be imported in the **Files of type** drop down list. Values are:
   - SmartWorx raw data
   - GSI (Observations)
   - GSI (Points only)
   - Database points (DBX, GeoDB)
   - LandXML

   ![Tip](image)
   When importing GSI data, click the Settings button to define additional import settings for how the TPS raw data will be imported to a project.

9. Browse through the folder directory and select the file or folder to import. The file or folder can be on the computer hard drive or on the inserted data storage device.

10. Select **Import** to proceed to the **Assign** window.
### Step 11
In the **Assign** window, before assigning the data to a project, the following functionality is available:

- Select the **TPS** tab to preview the raw TPS data. On this page, it is possible to select or deselect which data is assigned to the project.
- Select the **GPS** tab to preview the raw GPS data. On this page, it is possible to select or deselect which data is assigned to the project.
- Select the **Settings** tab to modify the assign settings. The settings available depend on the type of data to be imported.
- Select the **Backup** button to save, if desired, the raw data from a data storage device to the computer hard drive. Select a directory from the browser and select **OK** to confirm.
- Select the **Fieldbook** button to generate a Fieldbook Report on the jobs to be imported.

### Step 12
To import the data to a project:

- In the **General** tab, select an existing project from the list.
- OR
- Create a new project by right clicking and selecting **New...** from the context menu.

### Step 13
Select the **Assign** button to import the data into the selected project.
Total Quality Management: Our commitment to total customer satisfaction.

Leica Geosystems AG, Heerbrugg, Switzerland, has been certified as being equipped with a quality system which meets the International Standards of Quality Management and Quality Systems (ISO standard 9001) and Environmental Management Systems (ISO standard 14001).

Ask your local Leica Geosystems dealer for more information about our TQM program.
